DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 3-9, 11-15, 17, 18, 20-24 rejected under 35 U.S.C. 103(a) as being unpatentable over Furukawa (6,051,945) in view of McHugh et al. (5,509,504).

Furukawa discloses a window position detection and anti-pinch system for a vehicle door having a window, the system comprising: at least one sensing device (54a and 54b) disposed adjacent the window for detecting the position of the window relative to the frame, the sensor producing an output signal representative of the window position; and a controller responsive to the output signal for comparing the output signal against predetermined values to determine whether an obstruction exists as disclosed in the abstract. Furukawa discloses a first sensing device for sensing position and second sensing device for sensing obstruction as disclosed in the abstract. Energy is blocked when obstruction is detected and the motor is reversed as seen in figure 8. The encoder of Furukawa is rotatable and further monitors pulses as discussed in column 4, line 64 through column 5, line 25. The encoder further has a multi-pole magnet.

Furukawa does not disclose a coding arrangement.

Application/Control Number: 09/939,138

2007

Art Unit: 2837

However, McHugh et al. discloses a coding arrangement for detecting a position of a door (moveable member) based on a coding strip which is read by a photo-detector as discussed in column 2, line 61 through column3, line 2. McHugh et al. further provide a moveable or rotatable incremental linear encoder as discussed in the abstract (figure 1).

Official Notice is taken with respect to photo-interrupters being well known in the art for detecting window position and outputting a window obstruction or position signal.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilized the teachings of McHugh et al. with the apparatus of Furukawa, because the use of coding arrangement provides a more accurate position detecting system, wherein the coding provides exact position, wherein the use of the system with a door or a window, would provide the same, wherein the applicant's present invention teaches the use with a window or door, wherein anti-pinch would be advantageous with either embodiment.

Response to Arguments

3. Applicant's arguments with respect to claims 1-9, 11-15, 17, 18, and 20-24 have been considered but are most in view of the new ground(s) of rejection.

With respect to the Official Notice above, Gray and Zhang et al. show photo-detectors or photo-interrupters in combination with obstruction detection of a window or door (moveable member).

Page 4

Art Unit: 2837

It is believed that the references in combination provide the teachings of the claimed invention.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37. CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marlon T Fletcher whose telephone number is 703-308-0848. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Nappi can be reached on 703-308-3370. The fax phone numbers

Application/Control Number: 09/939,138
